

ABSTRACT OF THE DISCLOSURE

A shifting device (1), for the transmission of shifting commands to a vehicle gearbox includes a housing (2) and/or a frame, a selector lever (4), transmitting shift commands to the gearbox. A knob (3) provides a grip for the hand of the vehicle driver. An adapter (7) is provided for the knob (3) with an integrated switch (5a). The adapter is fitted to the selector lever (4) and forms a connection point between the selector lever (4) and the knob (3). The shifting device (1) is provided for assembly in a motor vehicle and, preferably after fitting of the shifting device (1), a shifting gate is placed over the selector lever (4).
